

Change Healthcare Imaging Fellow™

Unlock Your EMR Data

Have you invested millions into your EMR and still have trouble using it effectively?

You're not alone — **58%**¹ of physicians say their EMR is hard to use and **90%**² say a better way to get patient data would improve patient care.

Context is crucial. Having relevant patient data available at the point of diagnosis is essential in a value based care environment. What clinicians need is an easier way to access the relevant data that lets them make more accurate and informed diagnoses.

Fortunately, Change Healthcare Imaging Fellow intelligently provides the radiologist with relevant prior reports, filtered clinical notes, related medications, labs and more. Rich clinical data is served to the radiologists within their imaging cockpit, so they do not have to go looking for it.

Avoid Unnecessary Testing When you Gain Relevant Information

Find the Needle in the Haystack

Radiologists need EMR data available alongside images to deliver the best care possible for their patients. Change Healthcare Imaging Fellow optimizes the data in your EMR and PACS to help you find the “needle in the haystack.”

Change Healthcare Imaging Fellow is a radiologist’s real-time, digital fellow. When a study is launched, relevant contextual data, including relevant prior, reports, filtered clinical notes, lab values, medications, and surgical notes are displayed. This additional information offers the radiologist a wealth of knowledge that helps improve their diagnoses and provide more informed recommendations.

Easy-to-view widgets present the data in an imaging-centric view within the reading cockpit. Flexible templates accommodate the nuances of the diagnostic workflow, and let users adjust both the amount and type of information they display.

Manage Cost and Boost Reimbursement

As radiologists’ roles evolve under value-based care, they continually need to prove their worth. Imaging Fellow helps them participate fully with the care team and reduce costs in key areas like accurate reporting, faster time to discharge and improved diagnostic accuracy.

Providing accurate reports upfront can save time and money. Missing information often leads to billing denials, additional information requests, and referring clinicians dissatisfaction. Imaging Fellow lets radiologists access the data they need to deliver quality reports the first time.

Improving time to discharge and avoiding unnecessary procedures can also help reduce costs. Clinical context at the point of care helps radiologists improve follow-up recommendations and avoid expensive, unnecessary tests.

A radiologist who can arrive at a quick, accurate diagnosis can help reduce risk and cost

“It’s going to save radiologists time. It’s going to save hospitals money. And it’s going to improve patient care.”

–Dr. Jeffrey Mendel

associated with adverse events, like malpractice or diagnostic error. The EMR data available in Change Healthcare Imaging Fellow provides vital clinical context that helps improve and accelerate diagnostic accuracy.

Translate Data to Insight

Change Healthcare Imaging Fellow users can cite examples of times the solution helped them get to a more accurate diagnosis. Dr. Daniel Gale, at Lowell General recalls a case where a referring physician’s note helped him diagnose tiny, subtle fractures of the T7 and T8 vertebra. He says, “Quite honestly, if I hadn’t been directed, I may not have seen them. And I’m lucky to have seen them even after being told where to look—that’s how subtle they were.”

“When you gain relevant information, you avoid unnecessary testing. That’s the bottom line.”

–Dr. Elon Gale

About Change Healthcare

Change Healthcare is inspiring a better healthcare system. Working alongside our customers and partners, we leverage our software and analytics, network solutions and technology-enabled services to help them improve efficiency, reduce costs, increase cash flow, and more effectively manage complex workflows. Together, we are accelerating the journey toward improved lives and healthier communities.
